Aircraft

The Boeing 737 brims with the hum of its workings, fills each of us with that hum, as the aircraft is also filled with our functions—transpirations, contagions, discourse, excretions, breath, sweat, heart and blood rhythms—all of it mixing with the currents that surround us and shape our flight path, like the bump we just went over, which the pilot explains is backwash from another plane en route before us, wind curling out in vortices that we intersected like a boat crossing the wake of another boat. It felt like going over a pothole in the road. For a moment I forgot we were flying, thought we traversed hard ground, textured surface beneath us instead of rippling atmosphere. That jolt still vibrates
through the cabin, through all of us. We are altogether
wadded, quilted, packed in as batting. There is no emptiness.

There is only the thick flow of interweaving processes, fluff
and lint, saturated and congealed, turgid and enriched. Nothing
that isn’t touched by something and so by everything. A bottle
of water I bought at the airport newsstand trickles through
me in swallows, urges me to leave my seat for the lavatory.
Others shift their bodies to accommodate me. Recirculated
air swirls and eddies as I make my way down the aisle, then
back to my seat, causing one man to look up from composing
something with GarageBand on his iPad, to suspend the notes
in his headphones that I can’t see; interrupting the crossword
puzzle the woman beside me is working, causing her to think
conjoining words. And now the flight attendant approaches
with earnest concern, repeating “Water?” “Water?” “Water?”
“Water?” She offers a tray of clear plastic cups to each seat-
row of earthbound fabric as the plane begins its descent, returning us to a thirsty, threadbare continent where too many live as if unaffected by what rips the fabric apart.

**Field Study / Search Field**

maybe in the first fluff-pocked scrub trees precursor tufts prickled with coarse hairs littered through with intractable seeds we’d find words for the matter at hand the fabric afoot come to raw fiber washed clean beaten on a mat combed into strands to twist into thread fine as sunlight she rubbed spider webs on her arms and hands never tired of weaving bolts of the commonplace to lay over the faces of the dead simple as
rain and wind present as haptic worlds
flitting at the twig ends of our neurons
